

Steps to Setup the Auto Scaling Group in EC2

Step 1: Click on the **All Services**.

Step 2: Click on the **EC2**.

Step 3: Scroll Down and click on the **Launch Templates** and click on the **Create launch template**

The screenshot shows the AWS Management Console interface for the 'Launch templates | EC2 Manager' page. The browser address bar shows the URL: `ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#LaunchTemplates:`. The left sidebar contains a navigation menu with the following items: 'New EC2 Experience', 'EC2 Dashboard', 'EC2 Global View', 'Events', 'Tags', 'Limits', 'Instances', 'Instances **New**', 'Instance Types', 'Launch Templates' (highlighted in orange), 'Spot Requests', 'Savings Plans', 'Reserved Instances **New**', 'Dedicated Hosts', 'Capacity Reservations', and 'Images'. The main content area has a dark blue header with the text 'Compute' and 'EC2 launch templates'. Below this, the text reads: 'Streamline, simplify and standardize instance launches'. A paragraph explains: 'Use launch templates to automate instance launches, simplify permission policies, and enforce best practices across your organization. Save launch parameters in a template that can be used for on-demand launches and with managed services, including EC2 Auto Scaling and EC2 Fleet. Easily update your launch parameters by creating a new launch template version.' On the right side, there is a white box with a green border containing the text 'New launch template' and an orange button labeled 'Create launch template'. At the bottom right, there is a white box with the text 'Documentation'.

Step 4: Type the Template name.

EC2 > Launch templates > Create launch template

Create launch template

Creating a launch template allows you to create a saved instance configuration that can be reused, shared and launched at a later time. Templates can have multiple versions.

Launch template name and description

Launch template name - *required*

my-template

Must be unique to this account. Max 128 chars. No spaces or special characters like '&', '*', '@'.

Template version description

A prod webserver for MyApp

Max 255 chars

Auto Scaling guidance [Info](#)

Select this if you intend to use this template with EC2 Auto Scaling

☐ Provide guidance to help me set up a template that I can use with EC2 Auto Scaling

Step 5: Select the Amazon Machine Image.
