

Create and mount an Amazon EFS file system

using Amazon EC2 Launch Instance Wizard

Step 1: Create the security groups

For this step, you create two security groups - one that is attached to the Amazon EC2 instance and one that is attached to the Amazon EFS file system.

Open the [Amazon VPC dashboard](#) and In the left navigation pane, choose Security Groups. There will be a default security group listed. Create the following two additional security groups in the default VPC. For detailed steps, see [Creating a Security Group](#).

- EC2-sg: This security group will be attached to the EC2 instance and it allows only SSH connection inbound to the EC2 instance and any outbound connectivity.
- EFS-sg: This security group will be attached to the EFS file system and allows only TCP connection on port 2409 from the EC2 instance and any outbound connectivity.

Security Group1: -

The image shows two screenshots from the AWS Management Console. The top screenshot is the 'Security Groups (1)' page in the VPC dashboard. It shows a table with one entry: 'default' security group with ID 'sg-094372c1590200680' and VPC ID 'vpc-0e9096f0008e45be5'. An arrow points to the 'Create security group' button in the top right. The bottom screenshot is the 'Create security group' wizard. It has three sections: 'Basic details', 'VPC', and 'Tags'. In the 'Basic details' section, the 'Security group name' is 'EC2-sg' and the 'Description' is 'allows only SSH connection'. In the 'VPC' section, the 'VPC' is 'vpc-0e9096f0008e45be5' (default). An arrow points to the 'Create' button at the bottom right.

Security Groups (1)

Name	Security group ID	Security group name	VPC ID	Description
-	sg-094372c1590200680	default	vpc-0e9096f0008e45be5	default VPC security group

Create security group

A security group acts as a virtual firewall for your instance to control inbound and outbound traffic. To create a new security group, complete the fields below.

Basic details

Security group name **EC2-sg**
Name cannot be edited after creation.

Description **allows only SSH connection**

VPC

vpc-0e9096f0008e45be5

☐	-	sg-0cb867ff79f4782e	EFS-sg	vpc-0e9096f0008e45be5	allows only TCP connection on port 24...
☐	-	sg-094372c1590200680	default	vpc-0e9096f0008e45be5	default VPC security group

Step 2: Create the EFS file system

Navigate to [Amazon EFS in the AWS Management Console](#) and choose Create file system.

Amazon EFS > File systems > Create

Step 1
File system settings

Step 2
Network access

Step 3 - optional
File system policy

Step 4
Review and create

File system settings

General

Name - optional
Name your file system.
EFS

File system type
Choose to either store data across multiple Availability Zones or within a single Availability Zone. [Learn more](#)

☒ **Regional**
Offers the highest levels of availability and durability by storing file system data across multiple Availability Zones within an AWS Region.

☐ **One Zone**
Provides continuous availability to data within a single Availability Zone within an AWS Region.

Automatic backups
Automatically backup your file system data with AWS Backup using recommended settings. Additional pricing applies. [Learn more](#)

☐ Enable automatic backups

We recommend that you create a backup policy for your file system

Step 1
File system settings

Step 2
Network access

Step 3 - optional
File system policy

Step 4
Review and create

Lifecycle management

Automatically save money as access patterns change by moving files into the Infrequent Access (IA) or Archive storage class. [Learn more](#)

Transition into Infrequent Access (IA)
Transition files to IA based on the time since they were last accessed in Standard storage.

None

Transition into Archive
Transition files to Archive based on the time since they were last accessed in Standard storage.

None

Transition into Standard
Transition files back to Standard storage based on when they are first accessed in IA or Archive storage.
Valid only when you have enabled lifecycle management to transition files into IA or Archive storage.

None

Encryption
Choose to enable encryption of your file system's data at rest. Uses the AWS KMS service key (aws/elasticfilesystem) by default. [Learn more](#)

☐ Enable encryption of data at rest

Performance settings

Throughput mode
Choose a method for your file system's throughput limits. [Learn more](#)

☐ **Enhanced**
Provides more flexibility and higher throughput levels for workloads with a range of performance requirements.

☒ **Bursting**
Provides throughput that scales with the amount of storage for workloads with basic performance requirements.

Review commands

Select created EFS

Verify EFS file system is mounted

Navigate to the EC2 console. In the EC2 navigation pane, choose **Instances**, then select the EC2 instance you created in Step 3. Choose **Connect**.

In the Connect to your instance dialog box, choose **EC2 Instance Connect** (browser-based SSH connection) and then choose **Connect**.

type the following command:

`df -T -h`

```
us-west-2.console.aws.amazon.com/ec2/v2/connect/ec2-user/i-
Last login: Wed Apr 1 09:29:30 2020 from ec2-
Amazon Linux 2 AMI
https://aws.amazon.com/amazon-linux-2/
1 package(s) needed for security, out of 1 available
Run "sudo yum update" to apply all updates.
[ec2-user@ip- ~]$ df -T -h
Filesystem      Type      Size  Used Avail Use% Mounted on
devtmpfs        devtmpfs  475M   0    475M   0% /dev
tmpfs           tmpfs     492M   0    492M   0% /dev/shm
tmpfs           tmpfs     492M  508K   492M   1% /run
tmpfs           tmpfs     492M   0    492M   0% /sys/fs/cgroup
/dev/xvda1      xfs       8.0G  1.3G   6.8G  16% /
127.0.0.1:/     nfs4      8.0E   0    8.0E   0% /mnt/efs/fs1
tmpfs           tmpfs     99M    0    99M   0% /run/user/0
tmpfs           tmpfs     99M    0    99M   0% /run/user/1000
[ec2-user@ip-172- ~]$
```

You can see that the EFS File System is mounted at `mnt/efs/fs1` which is the same default path as mentioned in Step 3.4. This verifies that your file system is successfully mounted on the EC2 instance.

Step 5: Clean up

Terminate EC2 instance

5.1 — Open the [Amazon EC2 console](#).

5.2 — In the navigation pane, choose Instances.

5.3 — Select the instance you created for this tutorial, and choose Actions, Instance State, Terminate.

5.4 — Choose Yes, Terminate when prompted for confirmation.

Note: This process can take several seconds to complete. Once your instance has been terminated, the Instance State will change to terminated on your EC2 Console.

Delete EFS file system

5.5 — Open the [Amazon EFS console](#).

5.6 — On the File systems page, select the file system you created for this tutorial.

5.7 — Choose Delete.

5.8 — In the Delete file system dialog box, enter the file system ID shown, and choose Confirm to confirm the delete.

Also Delete Security groups.
