

Creating an IAM User in AWS

Steps for creating an IAM User

Step 1: Login to AWS Account and search for IAM

Step 2: Open Amazon IAM User dashboard

Step 3: Go to Users and click on Create user

Step 4: Specify User details like User name, select User type as IAM user and scroll down

The screenshot shows the AWS IAM console's 'Create user' wizard, specifically the 'Specify user details' step. The left sidebar shows a progress bar with four steps: 'Specify user details' (selected), 'Set permissions', 'Review and create', and 'Retrieve password'. The main content area is titled 'Specify user details' and contains a 'User details' section. In this section, the 'User name' field is filled with 'iam_aishwarya'. Below it, there is a checkbox labeled 'Provide user access to the AWS Management Console - optional' which is checked. A note explains that providing console access is a best practice for managing access in IAM Identity Center. Below this, a section titled 'Are you providing console access to a person?' asks for the 'User type'. Two options are presented: 'Specify a user in Identity Center - Recommended' (unselected) and 'I want to create an IAM user' (selected). A note recommends creating IAM users only if you need to enable programmatic access through access keys, service-specific credentials for AWS CodeCommit or Amazon Keyspaces. The bottom of the page shows the AWS footer with 'CloudShell', 'Feedback', and copyright information for 2025.

Step 5: Select Custom password and then click on Next

The screenshot shows the AWS IAM console's 'Create user' wizard, specifically the 'Console password' step. The left sidebar shows a progress bar with four steps: 'Specify user details', 'Set permissions', 'Review and create', and 'Retrieve password'. The main content area is titled 'Console password' and contains two options: 'Autogenerated password' (unselected) and 'Custom password' (selected). The 'Custom password' option has a text input field with a masked password '*****'. Below the input field, there are two bullet points: 'Must be at least 8 characters long' and 'Must include at least three of the following mix of character types: uppercase letters (A-Z), lowercase letters (a-z), numbers (0-9), and symbols ! @ # \$ % ^ & * () _ + - (hyphen) = [] { } | ' '. There is also a checkbox labeled 'Show password' which is unchecked. Below these options, there is a checkbox labeled 'Users must create a new password at next sign-in - Recommended' which is checked. A note explains that users will automatically get the 'IAMUserChangePassword' policy to allow them to change their own password. At the bottom right, there are 'Cancel' and 'Next' buttons. The bottom of the page shows the AWS footer with 'CloudShell', 'Feedback', and copyright information for 2025.

Step 6: Leave Permissions as default then click on Next**Step 7:** Review the User details then click on Create User

Step 8: User created successfully notification is displayed, click on Return to users list

Step 9: View the new IAM User details in Users list**Step 10:** Sign Out from AWS account

Step 11: Go to IAM user sign in Window and enter IAM User Sign in credentials and click on Sign in

Step 12: Reset the Password and click on Confirm Password Change

Step 13: Password reset successful window appears click on Continue to sign in**Step 14:** IAM User Console Window Appears, explore the features available

Steps to delete the IAM User created

Step 1: Sign out from IAM User Console and Log in using Root User ID

Step 2: Go to IAM Dashboard > Users then select the User and click on Delete

Step 3: Type the user name and Click on Delete user**Step 4:** User deleted notification is displayed confirming successful deletion

We can log out from AWS Console
